# INTRODUCCION

---

El presente volúmen corresponde al año 1902, cuarto de la publicación de las observaciones meteorológicas practicadas en las Estaciones de la costa de Chile; y ha sido confeccionado como en los años anteriores, salvo pequeñas modificaciones que se han introducido para la mejor comprensión de los datos recopilados.

Consta de tres partes:

La primera parte, comprende las observaciones diarias tomadas en 16 estaciones durante todo el año, sin exceptuar domingos ni días feriados, a las 8 a. m., 2 y 9 p. m.

La segunda parte, contiene las observaciones trihorarias, practicadas tres veces al mes en 14 estaciones, a las 12, 3, 6 y 9 a. m.; 12 m. 3, 6 y 9 p. m.

La tercera parte, se compone de un resumen mensual y anual de cada una de las 16 Estaciones en que se practicaron observaciones diarias, cuyos resúmenes han sido sacados de los respectivos estados; y un resumen jeneral del servicio meteorológico de la República.

---

Fuera de las tres partes en que está dividido el Anuario, hai un mapa que señala la posición jeográfica de cada estación y un cuadro que dá la longitud y latitud de ellas, la altitud del barómetro sobre el nivel del mar y el nombre de los observadores.

## INTRODUCCION

Las medias de las observaciones, son aritméticas.

Conforme á la decision del Congreso Meteorológico celebrado en Viena el año 1873, se han empleado los signos ingleses para indicar la direccion de los vientos.

La velocidad del viento ha sido estimada por la escala de 0 a 6, esceptuando Iquique, en los meses de Enero a Agosto inclusive, Punta Anjeles y Este de la Isla Mocha, todo el año, en cuyas estaciones se ha tomado la velocidad en metros por segundo. En la Estacion de Punta Anjeles se apreció la fuerza del viento, en las observaciones trihorarias, por la escala de 0 a 6.

La nebulosidad es espresada en escala de 0 a 10. La abreviatura de Cúmulus es C; y la de Cirrus, Ci.

---

No deben tomarse en consideracion las presiones barométricas de la Estacion de Caldera durante todo el año, y las de Juan Fernandez de Enero y Febrero, por haberse notado en ellas graves errores.

El agua caida en la Estacion de Punta Dungeness, no ha podido ser apreciada por haberse inutilizado el pluviómetro.

LUIS A. WINROTH,  
Seccion de Meteorología.

V.º B.º

**J. Muñoz Hurtado,**  
Director del Territorio Marítimo.

## COORDENADAS GEOGRÁFICAS,

Altitud sobre el nivel del mar y nombres de los observadores en las Estaciones Meteorológicas

## FÉ DE ERRATAS

---

Página 14.—La media barométrica á las 2 p. m. es 59.7 y no 57.9.

Páginas 20, 22, 24 y 26.—La casilla Viento, debe leerse *Viento, direccion y fuerza*, en lugar de Viento, direccion y velocidad en metros por segundo, como está escrito.

Páginas 52 á 57.—El nombre de la Estacion es: *Faro de la Isla Chañaral*, y no Faro de Chañaral.

Páginas 124 á 131.—El nombre de la Estacion es: *Isla de Juan Fernandez*, y no Faro de Juan Fernandez.

Página 151.—El agua caída en el mes es: 1.1 m/m. y no 0.1 m/m.

Página 153.—El agua caída en el mes es: 27.8 m/m. y no 2.78 m/m.

Página 361.—El agua caída en el mes es: 262.20 m/m. y no 199.20 milímetros.
