INTRODUCCION

PARA EL

ANUARIO METEOROLÓGICO DE 1904.

Presentamos el sexto volumen del ANUARIO METEOROLÓGICO, correspondiente a 1904, el que contiene las observaciones meteorológicas tomadas diariamente en las estaciones de nuestro litoral.

Ademas de las observaciones, se acompaña a las estaciones del sur un gráfico comparativo del servicio, de los años 1903 i 1904 a fin de facilitar su estudio.

Al final, se acompañan, un resúmen del servicio en todo nuestro litoral, un cuadro que contiene las medias barométricas, termométricas, de humedad relativa i tension del vapor, por cada estacion i por cada mes.

No dudamos que este último cuadro ha de ser de gran utilidad, tanto para la marina, como para la agricultura i aun, para los mismos observadores, los que podrán, con poco estudio, predecir con mas o ménos fijeza el acercamiento de un mal tiempo.

En ese cuadro, se notará que la presion barométrica de las estaciones de Arica, Antofagasta i Lavapié, tienen pequeñas diferencias con sus vecinas; pero, ello es debido, a que los promedios, han sido solo de un año, pues, son de creacion reciente, los que serán subsanados, cuando con mayor número de observaciones se pueda hacer un promedio de dos o mas años, como se ha hecho con las demas.

Como lo anunciamos en el volumen anterior, en el presente Anuario, se han suprimido las observaciones de ISLA SANTA MARIA, ESTE DE LA ISLA MOCHA i PUNTA NIEBLA.

INTRODUCCION

Consecuentes con lo prometido en el tomo ha que nos hemos referido, en este, se dan las observaciones de Punta Lavapié correspondientes a Diciembre de 1903, conjuntamente con las de 1904.

Dada la importancia de establecer una estacion intermedia entre las de Islote de los Evanjelistas i Punta Dungeness, el 1.º de Enero de 1905, se estableció una en el Puerto de Punta Arenas, la que es servida bajo la vijilancia del señor Gobernador Marítimo de ese puerto.

Con motivo de la instalacion de un nuevo faro en Isla Huafo, la Direccion del Territorio Marítimo se propone establecer ahí una estacion meteorológica, la que, talvez inicie sus observaciones en 1906.

En la estacion de Arica, no se da la fuerza del viento, debido a que estando ese servicio a cargo de una persona poco experimentada en este ramo, aun no se ha podido obtener una lectura correcta de la esfera del anemómetro; pero, estando pendiente una visita de inspeccion a las estaciones dependientes de esta Direccion, se tratará de subsanar este inconveniente, tan pronto sea posible. En esa misma estacion se notará la falta de observaciones del termómetro de mínima durante los meses de Abril a Junio inclusive. Esa falta, es debido a haberse inutilizado el instrumento.

En la estacion del faro de Iquique, la fuerza del viento se apreció, de Enero a Marzo inclusive, en escala terrestre i el resto del año en metros por segundo, debido a que en los primeros meses, estuvo en reparacion el anemómetro indicador.

En el puerto de Antofagasta, se nota la omision, durante todo el mes de Diciembre, de las observaciones de las 8 de la mañana i 2 de la tarde, lo cual proviene de que, el encargado de este servicio, sin orden espresa, cambió las horas de observacion; i dado el fin que se persigue; el estudio de esta ciencia, la Direccion optó por suprimirlas.

La estacion de Caldera no cuenta con anemómetro indicador, por lo que, la fuerza del viento se da en escala terrestre.

INTRODUCCION

En Punta Tortuga, la fuerza del viento de Enero, Octubre, Noviembre y Diciembre se da en escala terrestre i los demas meses en metros por segundo, debido al mismo motivo que en la estacion de Iquique.

En la estacion de Punta Anjeles (Valparaiso), se nota que algunos dias, no se dá la fuerza del viento; pero, esta omision se debe a las interrupciones consiguientes que tienen los anemómetros eléctricos, con que está dotada esa estacion.

En la Isla de Juan Fernandez, el viento ha sido apreciado en escala terrestre; i, en los dias que aparecen con puntos suspensivos para llenar las casillas, debén apreciarse como calmas.

En Punta Carranza, el viento es apreciado en escala terrestre, a causa de que ese año aun no se habia dotado a la estacion de anemómetro indicador. En esa misma estacion se nota la falta de las observaciones del termómetro de máxima de Marzo a Julio, falta debida a la ruptura del instrumento.

En Punta Tumbes, la fuerza del viento es en escala terrestre. En el mes de Julio se iniciaron las reparaciones de la casa habitacion del faro, i durante el tiempo de la demolicion, se suspendieron las observaciones, rehabilitando una pieza a los diez dias, para reanudarlas.

La estacion de Punta Lavapié, da la fuerza del viento en metros por segundo.

La estacion del Oeste de la Isla Mocha, da el viento en escala terrestre, debido a que no está dotada de anemómetro indicador.

Punta Galera, por iguales motivos que la estacion anterior, da igualmente, la fuerza del viento en escala terrestre.

Ancud, se encuentra en igualdad de circunstancias de las dos estaciones numeradas anteriormente, con respecto a la fuerza del viento.

La estacion del Islote de los Evanjelistas, está en idéntico caso; i, dada su posicion, talvez, no se la dote de anemómetro indicador sino en 1906.

A la estacion establecida en el faro de Punta Dungeness, no se le pudo dotar de termómetro de máxima sino en Octubre de 1904, siendo el motivo de esta tardanza, la demora en llegar la remesa de instrumentos meteorológicos encargados a Europa. La fuerza del viento es tambien de escala terrestre, por carecer de anemómetro indicador.

Como la Seccion de Meteorolójia de la Direccion del Territorio Marítimo, se puede decir que es de reciente creacion, consideramos de interes dar una

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 I 1904

Estacion de Isla Juan Fernandez

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro = a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve Δ Granizo \square Helada \leftarrow Relámpago sin trueno \top Trueno solo i \odot Temblor

FARO DE PUNTA CARRANZA

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 I 1904

Estacion de Punta Carranza

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro=a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve △ Granizo ⊔ Helada < Relámpago sin trueno T Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 I 1904

Estacion de Punta Tumbes

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro=10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:
 * Nieve Δ Granizo — Helada < Relámpago sin trueno T Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 | 1904

Estacion de Punta Lavapie

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro = a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:
 * Nieve △ Granizo ⊥ Helada < Relámpago sin trueno ⊥ Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 I 1904

Estacion de Isla Mocha (Weste)

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro=10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve Δ Granizo ⊔ Helada < Relámpago sin trueno T Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 | 1904

Estacion de Punta Galera

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro=a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve Δ Granizo ⊔ Helada < Relámpago sin trueno T Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 | 1904

Estacion del Puerto de Ancud

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro = a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve Δ Granizo ⊔ Helada < Relámpago sin trueno T Trueno solo i ⊙ Temblor

GRÁFICO

COMPARATIVO DEL SERVICIO METEOROLÓGICO DE LOS AÑOS 1903 I 1904

Estacion de Islote de Evangelistas

NOTA.—Las líneas sin cortar representan las máximas de cada instrumento. Las cortadas indican las mínimas de los mismos. En la rosa de los vientos: los números del centro, indican los días de calma; i los números en cada uno de los rumbos, los vientos dominantes.—La lluvia caída indicada en cubos está en escala de 1 milímetro= a 10. Las líneas, signos i números negros corresponden al año 1903 i los rojos a 1904.

Los signos usados son los siguientes:

* Nieve Δ Granizo □ Helada ◁ Relámpago sin trueno T Trueno solo i ○ Temblor

GRÁFICO JENERAL

Comparativo del Servicio Meteorológico de Chile en los años 1903 i 1904.

ESPLICACION: La escala barométrica, es natural. Las líneas de punto i raya corresponden a las máximas de cada instrumento. Las sin cortar a la media. Las cortadas a la mínima. Las líneas rojas, corresponden a 1904 i las negras a 1903.

1903
A. Goni
 Director del Observatorio Marítimo

Conforme
Almudena
 Jefe de la Sección.

Eno. Simpson
 Estadístico.
