I N T R O D U C C I O N

LA OFICINA METEOROLOGICA DE CHILE, bajo la responsabilidad de la Fuerza Aérea como participante del Proyecto Hidrometeorológico del Gobierno de Chile, con ayuda del Fondo Especial de las Naciones Unidas y la Organización Meteorológica Mundial, ha querido entregar el Anuario Meteorológico de Chile, donde se proporcionan las informaciones básicas para el desarrollo de la economía del país y satisfacer las necesidades de las agencias interesadas nacionales e internacionales.-

Las publicaciones efectuadas corresponden a los Anuarios Meteorológicos de Chile de los años 1946, 1947, 1948, 1949, 1957, 1960, 1961, 1962 y 1963 respectivamente.-

La Oficina Meteorológica de Chile, al editar los documentos básicos de la Meteorología precitados, ha cumplido con los objetivos perseguidos por los Organismos Internacionales nombrados.-

SANTIAGO (Chile), año 1964.-

SERGIO BRAVO FLORES

Comandante de Escuadrilla (T)
Jefe Oficina Meteorológica de Chile

NOTA EXPLICATIVA

La presente publicación contiene los resúmenes mensuales y anuales de las Estaciones Meteorológicas y las lluvias de las Estaciones Pluviométricas, correspondientes a 1963.

Las horas de observación son las 08, 14 y 19 que corresponden a las horas 12, 18 y 23 de Greenwich, excepto la Estación de Isla de Pascua, cuya diferencia de horas con respecto a Greenwich es $dG = -7hr$.

Las Fórmulas usadas para los promedios, son las siguientes :

$$\text{Para la Temperatura: } \bar{T} = \frac{\bar{T}_{08} + \bar{T}_{19} + \bar{T}_x + \bar{T}_n}{4}$$

$$\text{Para la presión atmosférica: } \bar{P} = \frac{\bar{P}_{08} + \bar{P}_{14} + \bar{P}_{19}}{3}$$

Significado de algunas abreviaturas empleadas en esta publicación:

H = Altura de la estación sobre el nivel del mar.

\bar{T}_x = Temperatura máxima media mensual.

\bar{T}_n = Temperatura mínima media mensual.

T_x = Temperatura máxima absoluta del mes.

T_n = Temperatura mínima absoluta del mes.

Bf = Beaufort.

\bar{N} = Media aritmética diaria de la nubosidad considerando las observaciones de las 08, 14 y 19 hora local.

Var = varios o varias.

f = fuerza del viento.

F/O = faltan observaciones.

F/D = faltan días.

(.) = no hubo observación.

(-) = ausencia del fenómeno.

En la segunda parte, correspondiente a precipitaciones, se publican los datos de 439 estaciones.

Las cantidades de lluvia medidas, están aproximadas al entero, no así cuando la precipitación ha sido inferior a 1 mm. en que se representa con décimas.

Además, se ha convenido en representar por una línea (-) la suma de los meses sin lluvias; por 0 cuando ésta es menor de una décima de milímetro y en blanco en los meses en que no hubo observaciones.

Abreviaturas empleadas en la parte correspondiente a precipitaciones:
